window coverings

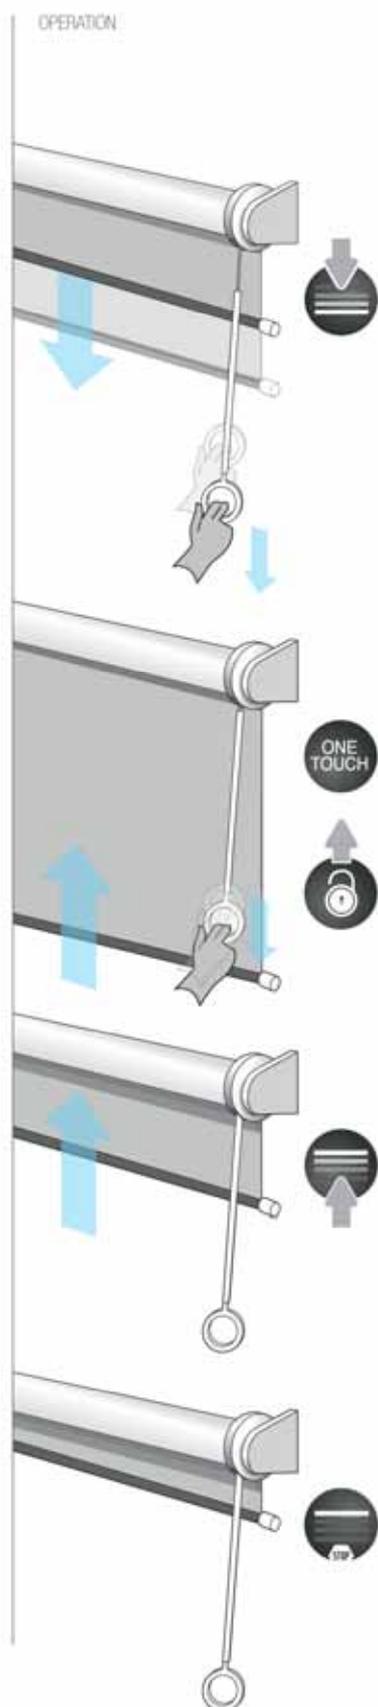

CORALIS is a new roller blind concept.
Affordable innovation and progress.

01 Single cord	02
02 Cordless	04
03 Touch and close	06
04 Hold and close	08
05 Hold and open	10
06 Power chain	12
07 Heavy duty	14
08 Double roller	16
09 Multi-joint	18

01 Single cord

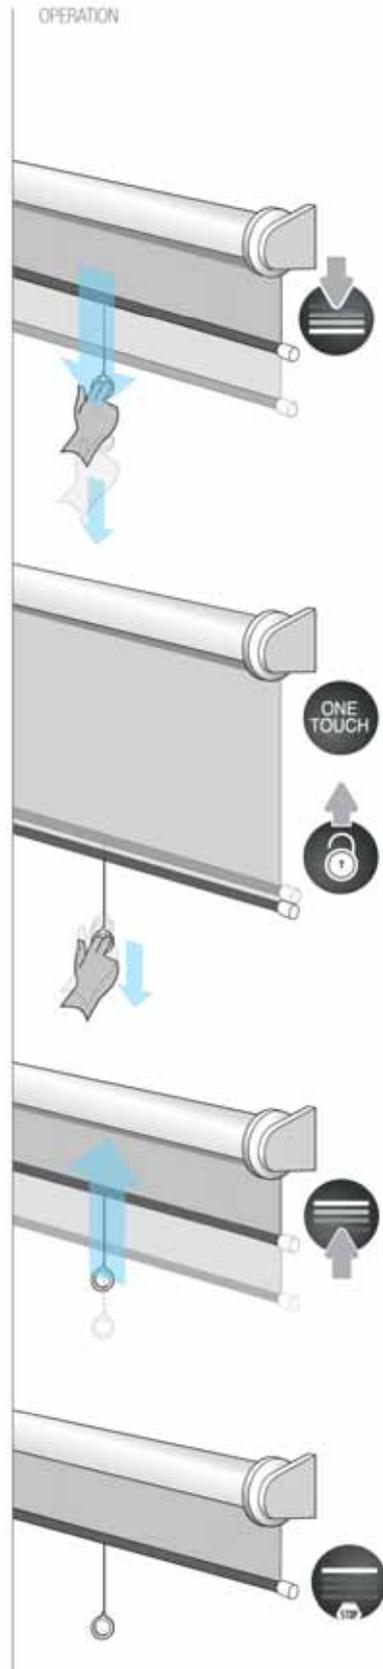

E SINGLE CORD

Child Safe is the new benchmark for roller blind nowadays. This innovative is fully complies with the new anti-strangling European rules.

Elegant, aesthetically pleasing, dependable and child proof. The Single Cord can also be operated as a Cordless spring blind.

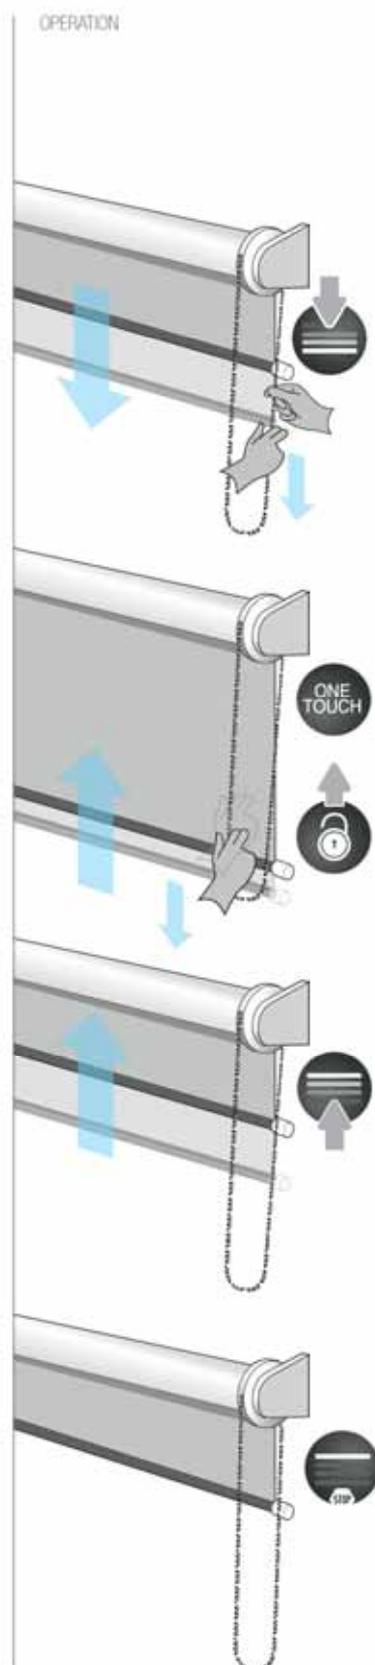

E CORDLESS

Spring operated roller blind with high precision mechanical brake. The blind can be stopped at any point with the utmost precision.

It can be released and stopped again with a very soft touch. The rewinding is slow, constant and neat. A precise stop is also available for the top run end.

03 Touch and close

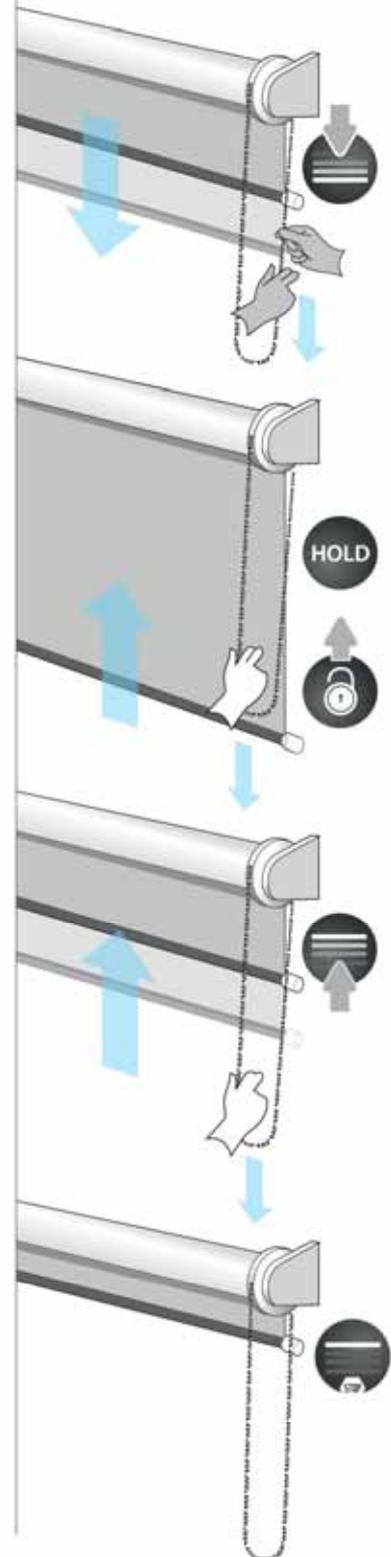

E TOUCH AND CLOSE

All the benefits of the Power Chain plus the "Touch and Go" innovative drive: a light tear to the chain and the blind will wind up automatically till the top. The Touch and Go can also be operated as a Cordless Spring blind. The blind operated with Touch and Go is smooth, precise and elegant.

04 Hold and close

OPERATION

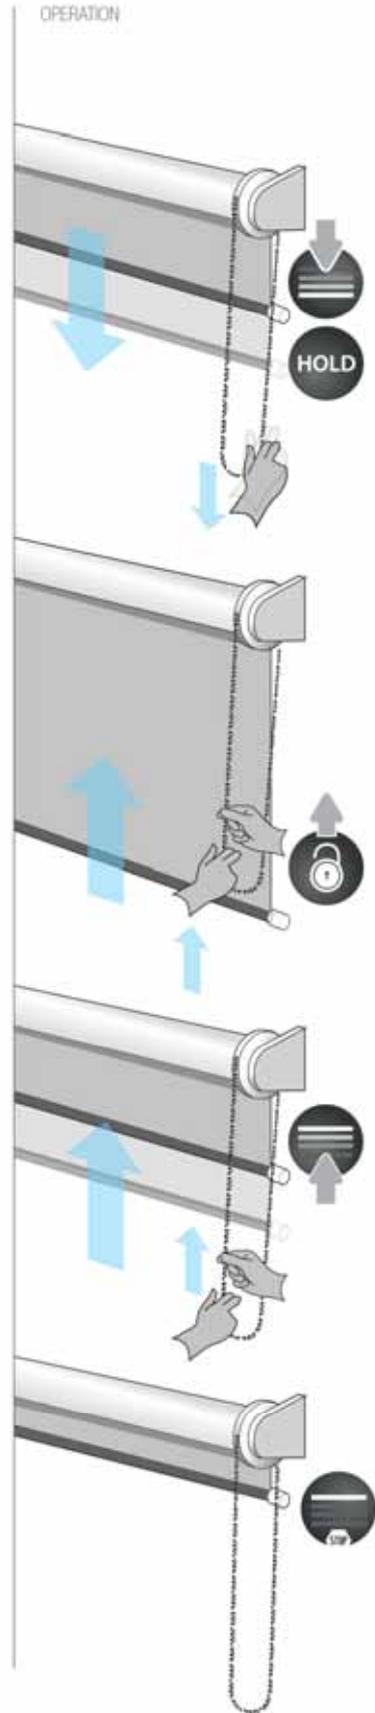

E HOLD AND CLOSE

The hold and go mechanism recreates the sensation of a motorized blind, without electric motor. The blind automatically runs up as long as you hold the chain lightly taut, and it will stop smoothly when the chain is released. An innovative safety device will preserve the mechanism in case you pull the chain in the wrong direction.

05 Hold and open

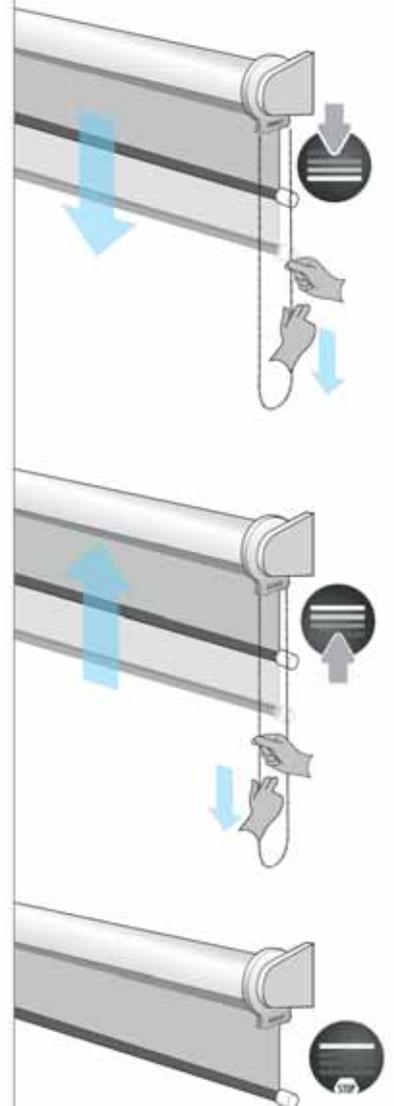

E HOLD AND OPEN

The hold and down blind is similar to the hold and go with inverted operations. The blind will run down as long as you hold the chain lightly torn, and it will stop when the chain is released. This solution is specially recommended for the combi/zebra blinds because the smooth stop of the blind avoids the bounce of the pull bar and the damages to the fabric.

06 Power chain

OPERATION

E POWER CHAIN

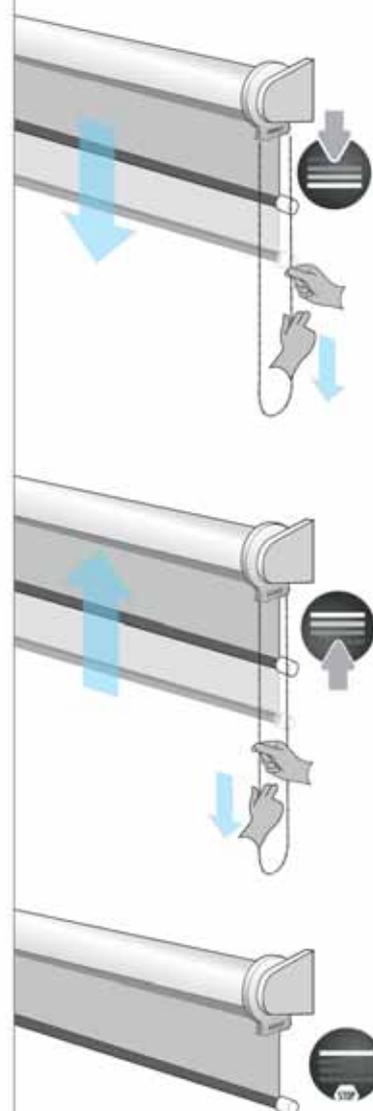

Extremely smooth and fluid chain drive mechanism. Available with single or double run stop. Easy to assemble and extremely reliable.

The spring assistance guarantees a perfect performance, regardless the kind of fabric used and up to the maximum permitted dimensions.

07 Heavy duty

OPERATION

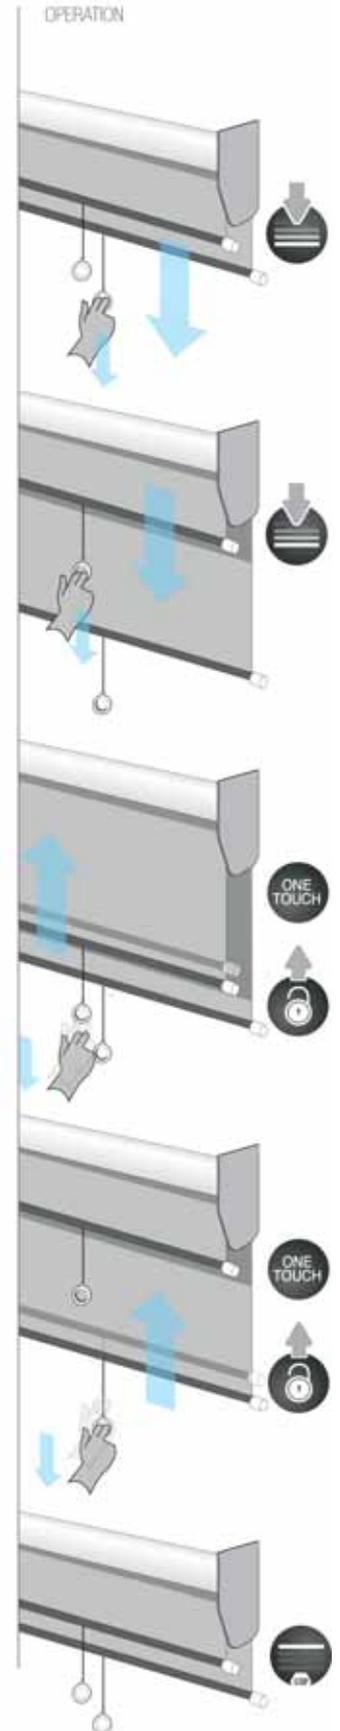

E HEAVY DUTY

Chain operated drive system for roller blind, heavy duty is simple for the assembly, reliable and durable. The blind can have one or two stops for the top and the bottom run end.

08 Double roller

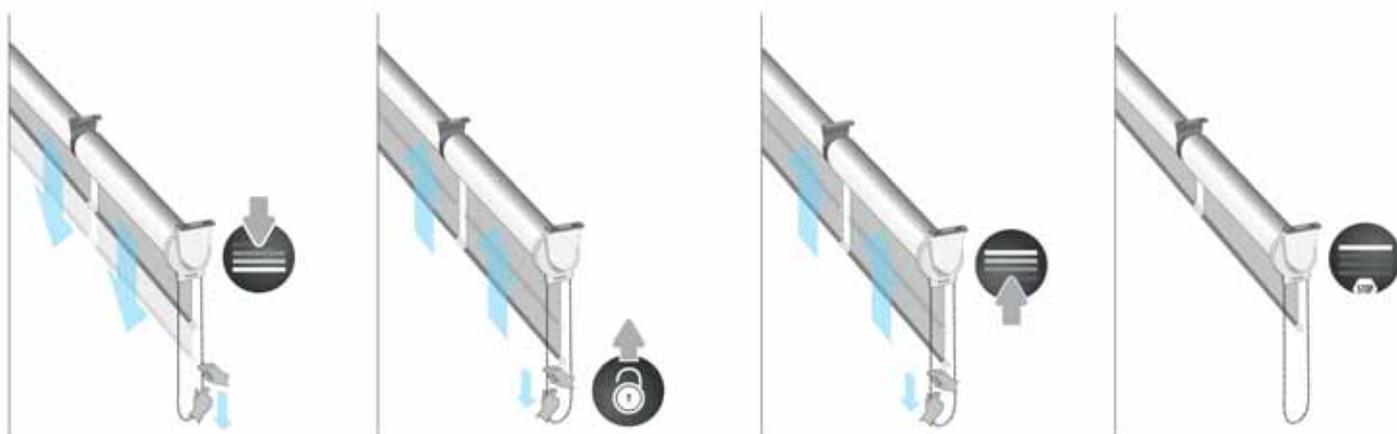

E DOUBLE ROLLER

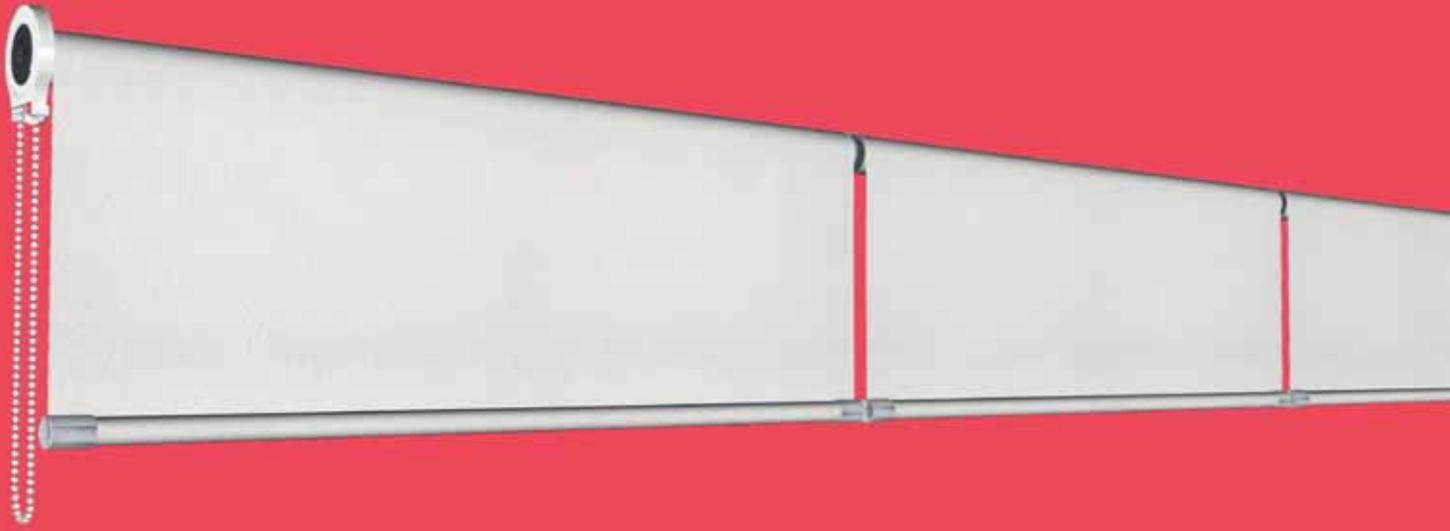

The solution that combines two blinds in one. With the double roller mechanism it is possible to have two different blinds in the same space. The two blinds can be operated separately at any time. The space needed is the same like for the single roller because the two tubes are installed one on top the other.

Multi-joint

OPERATION

E MULTI-JOINT

Surprising and unprecedented, the Multi Joint mechanism can operate up to 15 blinds simultaneously with one chain drive only. No need to open or close the blinds installed one by one: all the blinds connected will go up or down smoothly pulling the only one chain placed on the right or the left side. Save time and save money: one chain drive instead of 15 and no motors, no switches, no problems.

LIMITED LIABILITY AND WARRANTY DISCLAIMER

The Manufacturer makes hereby no representation or warranties expresses or implied, statutory or otherwise. All implied warranties, including those of merchantability or fitness for use are hereby disclaimed.

The product is made in conformity with the cogent standards provided for by European Health and Safety legislation.

Where expressly indicated, the product conforms to the standard of Safety and Performance defined by recognised international bodies and subject to their periodic verification.

Any loss or damage, both incidental and consequential, for any failure to perform or delay to perform due to wrong use or wrong installation of the product, as well as to the non-observance of technical specifications, are not covered by the Manufacturer's warranty.

The buyer alone is responsible to determine the suitability of the product.

Any product found to be defective within the limits of the warranty, will be replaced free of charge. Costs of labour or other extra subsequent costs relative to the removal, restitution or new installation of the product are not covered by the product warranty.
